DATA SHEET

- ★ Low sugar complete diet for all Lori's and Lorikeets.
- ★ Effectively stops Lori's and Lorikeets from "squirting" messy droppings.
- ★ Formulated nutrition – designed by avian vets.
- ★ Reduces mess and waste.

Completely balanced extruded pellet diet specifically designed to meet the particular dietary needs of Loris/Lorikeets.

Significantly reduces mess, waste and cost of feeding Loris/Lorikeets.

Effectively stops Loris/Lorikeets from squirting messy droppings. Low sugar diet containing scientifically balanced nutrition replicating the diet Loris/Lorikeets eat naturally.

Keeps Loris/Lorikeets in a healthy weight range. Supports breeding birds and ensures optimum nutrition for young. Supplies all essential vitamins, minerals, amino acids and calcium for a long healthy life. Apple flavoured for an attractive taste.

Directions:

For complete nutrition in your birds: Vetafarm diets should make up approximately 80% of the food fed.

There are specific Vetafarm diets available to suit most species of bird. Vetafarm pellets, crumbles or powders should be fed in a clean, dry dish placed where it cannot be contaminated by droppings, water or cage substrate. If the feed does become contaminated it should be replaced with fresh feed.

When a Vetafarm diet is used as the majority (80%) of the feed, no other prepared supplement is required. All the necessary protein, carbohydrates, vitamins and minerals are incorporated into the Vetafarm diet designed for your bird.

How much will your bird eat? As a guide, most cage and aviary birds will consume about 10% of their bodyweight in dry feed per day. As an example, a 100g cockatiel will consume approximately 10g of dry food per day.

Fruits and vegetables: Fruit and vegetables should be fed to your bird (20% of diet) to encourage interaction and provide variety and stimulation. Chewable items like pine cones, cuttlefish bone, and native tree branches may be provided to help occupy your bird.

Using Vetafarm foods as a supplement: Vetafarm diets can also be used as a supplement to seed based or homemade mixtures. Provide Vetafarm diets as approximately 10 - 20 % of the total diet. Ensure that the Vetafarm pellet, crumble or powder is being consumed. Further supplementation may be required depending on the seed/mixture used.

Converting Birds to Pellets: For fussy birds or those new to pellets, Vetafarm have an easy to understand You Tube help video available.

Recommended for: Australian and Exotic Loris/Lorikeets, especially suited to pet birds in mess sensitive areas but is also used in aviary birds to reduce mess and waste.

Nectar Pellets are a complete diet; no additional dietary supplementation is necessary. Blossom Nectar, fruits and vegetables can be given as behavioural enrichment.
